for courses in electromagnetics offered in electrical engineering departments and applied physics designed specifically for a one semester em course covering both statics and dynamics the book uses a number of tools to facilitate understanding of em concepts and to demonstrate their relevance to modern technology technology briefs provide overviews of both fundamental and sophisticated technologies including the basic operation of an electromagnet in magnetic recording the invention of the laser and how em laws underlie the operation of many types of sensors bar code readers gps communication satellites and x ray tomography among others a cd rom packed with

video presentations and solved problems accompanies the text

cd rom contains 77 interactive modules keyed to text 85 demonstration exercises solutions of selected end of chapter problems and copies of all figures in the book

the classic reference for radar and remote sensing engineers handbook of radar for scattering statistics for terrain has been reissued with updated practical software for modern data analysis applications first published in 1989 this update features a new preface along with three new appendices that explain how to use the new software and graphical user interface python and matlab based software has been utilized so remote sensing and radar engineers can utilize the wealth of statistical data that came with the original book and software this update combines the book and software previously sold separately into a single new product the text first presents detailed examinations of the statistical behavior of speckle when superimposed on nonuniform terrain the handbook of radar scattering statistics for terrain then supports system design and signal processing applications with a complete database of calibrated backscattering coefficients compiled over 30 years the statistical summaries of radar backscatter from terrain offers you over 400 000 data points compiled in tabular format with this text you ll own the most comprehensive database of radar terrain scattering statistics ever compiled derived from measurements made by both airborne and ground based scatterometer systems the database includes information from 114 references the text provides over 60 tables of backscatter data for 9 different surface categories all derived under strict quality criteria rigorous standards for calibration accuracy measurement precision and category identification make the database the most reliable source for scattering statistics ever available
